FCC Planner2UniFi Quick Start

Generated: 2026-03-04 22:07 UTC

What This Does

This app pulls Planning Center Calendar events, maps event rooms to UniFi Access doors, and builds/updates door unlock windows.

Access Requirement (Tailscale)

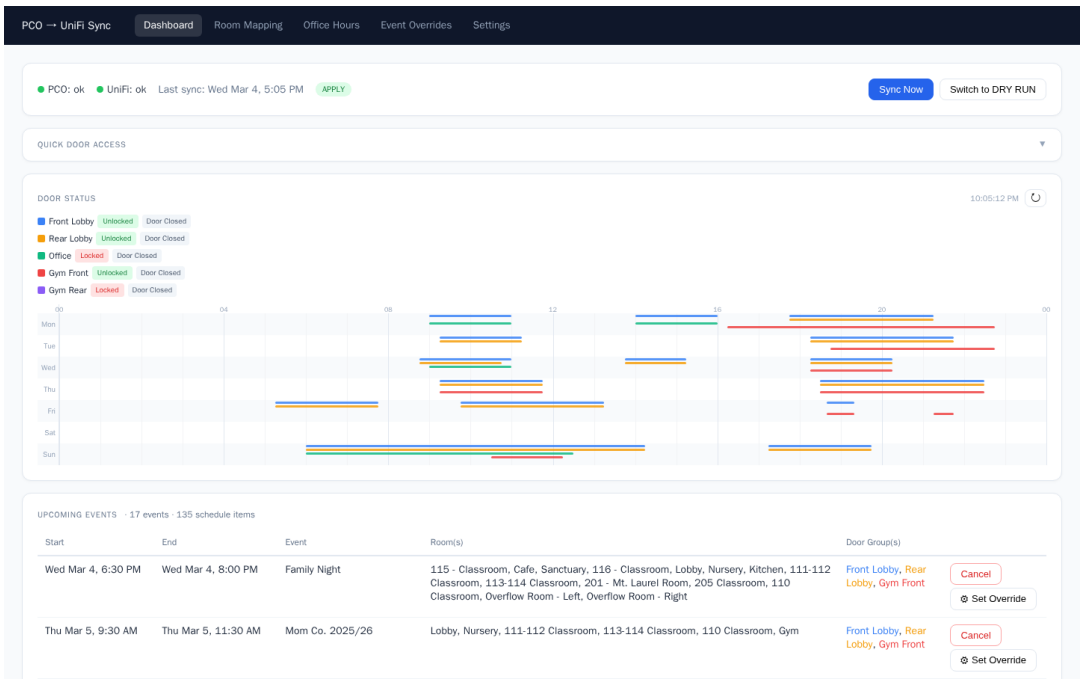
Tailscale is required for authentication and access.
Your Tailscale account is linked to your personal email address.
1) Accept your Tailscale invite sent to your personal email.
2) Sign in to Tailscale on your device using that same email account.
3) Connect to Tailscale before opening this app.
4) As long as you have internet and are connected to Tailscale, you can access this interface from anywhere.

Web address: https://fccplanner2unifi.panga-catla.ts.net/dashboard

Quick Start

1. Open **Dashboard** to view upcoming events and scheduled door windows.
2. Use **Approve/Deny** for after-hours events in the Pending Approval card.
3. Use **Cancel** on an event row to remove that event instance from the unlock schedule.
4. Use **Set Override / Edit Override** to set exact door open/close times for a specific event.
5. Use **Office Hours** page to configure recurring office access windows.

Dashboard Overview

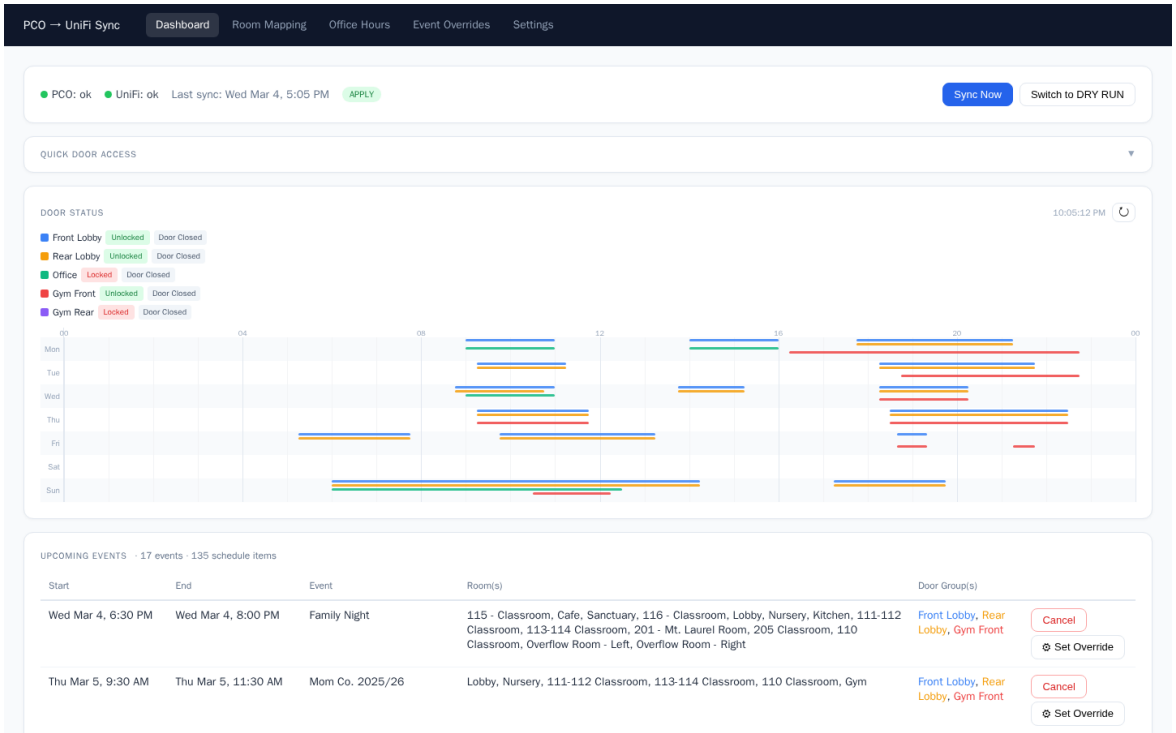


Dashboard

What this page is for: Main operations page for today/upcoming events, door windows, pending approvals, and manual access.

What users should do here:

1. Review upcoming events and confirm mapped rooms and doors look correct.
2. Approve or deny after-hours events in the Pending Approval card.
3. Use Cancel to remove a specific event instance from unlock schedules.
4. Add temporary/manual access windows when needed for special cases.

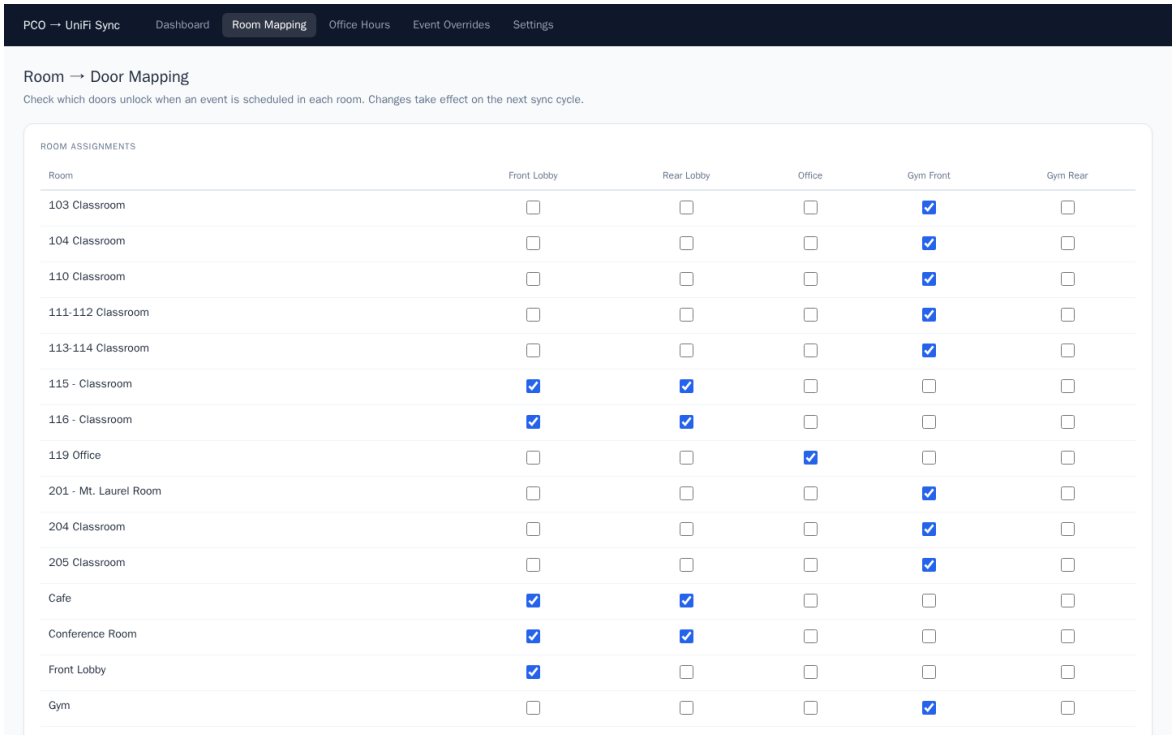


Door Mapping

What this page is for: Maps Planning Center room names to one or more UniFi Access doors.

What users should do here:

1. Add or edit room-to-door mappings when rooms are renamed or new spaces are used.
2. Confirm only rooms with real access-control doors are mapped.
3. Keep non-door locations (homes, online, off-site) unmapped so they are excluded.

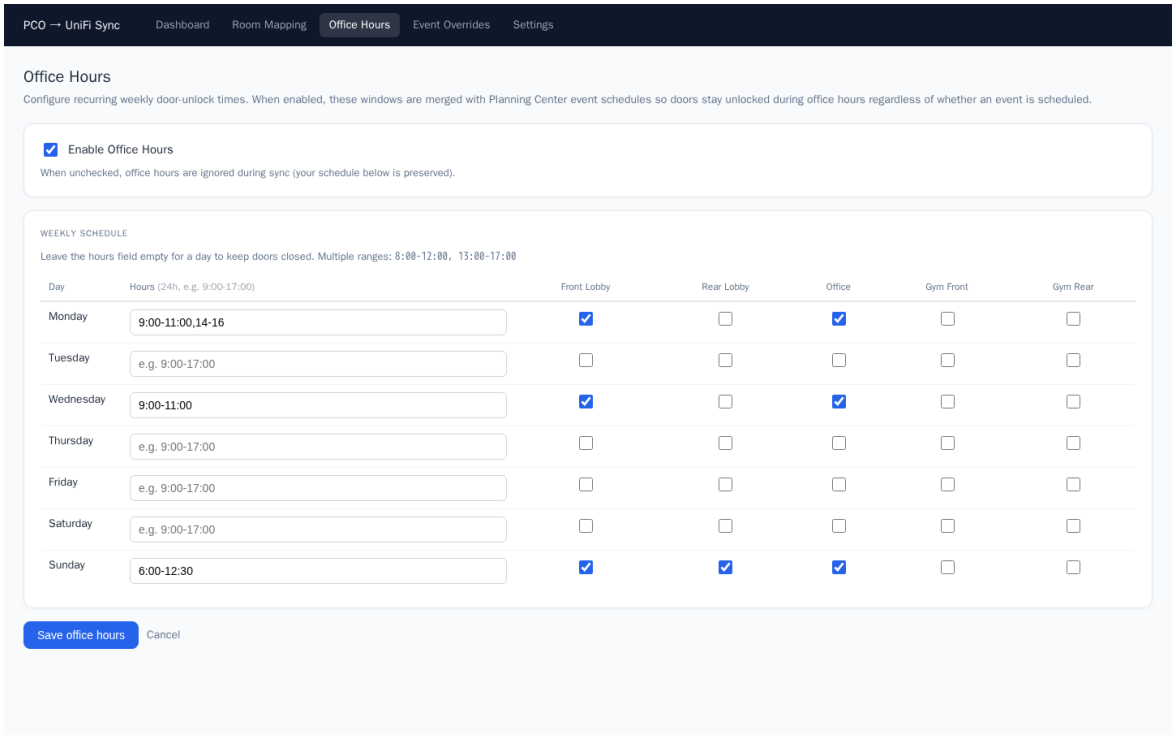


Office Hours

What this page is for: Defines recurring weekly door unlock windows outside event-based scheduling.

What users should do here:

1. Enable office-hours mode when recurring daily access is needed.
2. Set open/close times by day and apply only to the intended doors.
3. Use office-hours cancellation controls on Dashboard for one-off closed days.

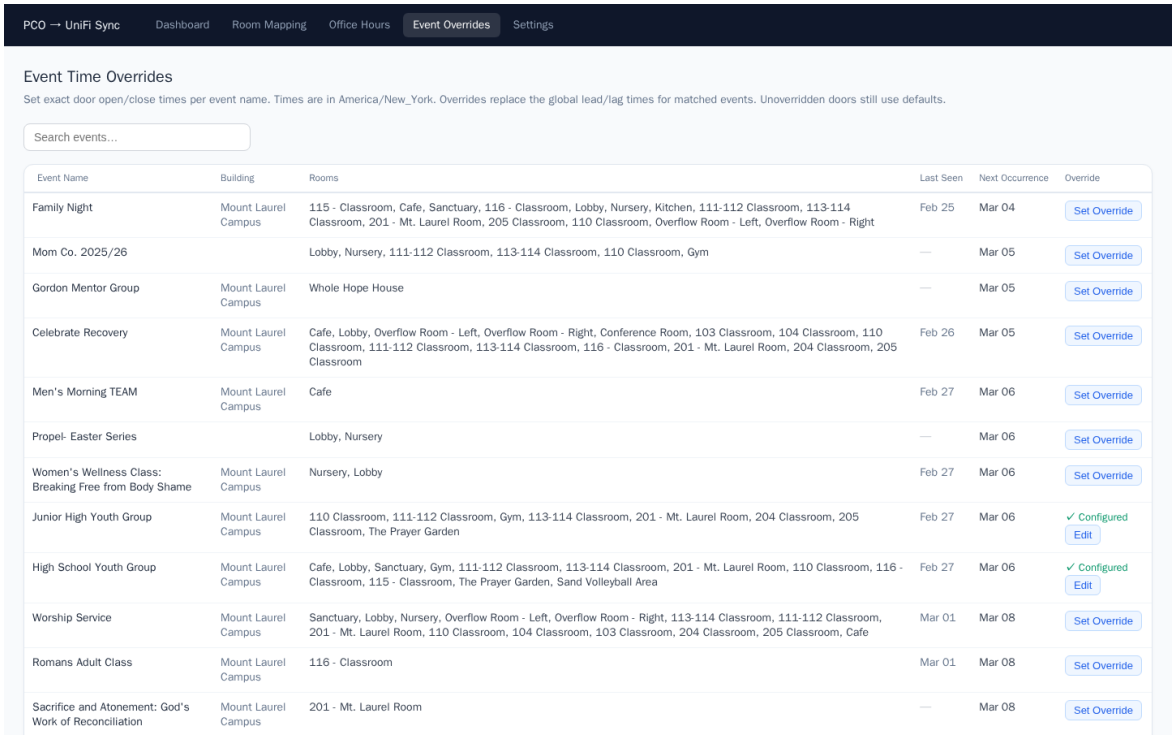


Event Overrides

What this page is for: Sets custom open/close times per door for specific event names.

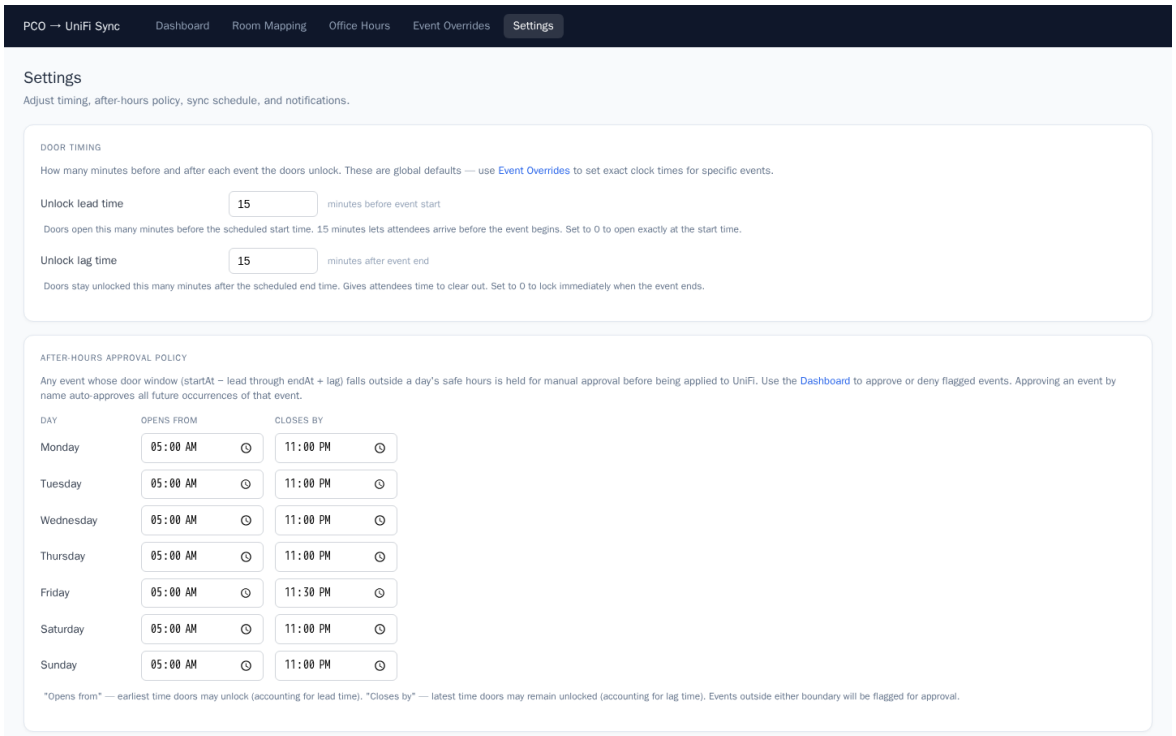
What users should do here:

1. Use overrides when an event needs different times than default lead/lag behavior.
2. Configure per-door windows so only selected doors follow custom times.
3. Review existing overrides regularly to avoid stale rules after event changes.



General Settings

What this page is for: Controls system-wide behavior such as timezone, sync cadence, location filter, and safe-hours policy.

What users should do here:


1. Adjust sync intervals/lookahead to match operational needs.
2. Verify timezone and safe-hours rules so approvals trigger correctly.
3. Update environment/config values carefully and recheck dashboard results after changes.
